INTERNSHIP SUMMARY REPORT 12

ABSTRACT

Summarize the problem, the implemented solution, the methods used and the observed results. Keep completed work separate from planned development. Replace this paragraph with the team's own summary; do not change the spacing or the margins.

Keywords: domain, requirements, architecture, implementation, testing

INTRODUCTION

Explain the project context, the people who need the system, the problem, the internship objectives and the scope of the work. Introduce the host organization using a source that supports the description [1]. Define abbreviations at first use.

The objectives of the internship are:

a) analysing the domain and the needs of the users;

b) designing and implementing the system;

c) testing the result and documenting the work;

1 DOMAIN ANALYSIS

Explain the domain, the existing approaches, the user needs and the requirements before describing the design. This opening paragraph is mandatory.

1.1 Problem and user needs

Describe the people, their workflow and the concrete difficulty being addressed. At least one subchapter per page; two subchapters must not share a page.

According to Figure 1.1, the system receives requests from the users and returns the processed result.

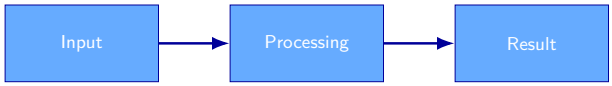

Figure 1.1 – Figure title

As shown in Table 1.1, each requirement is linked to the user need that motivates it.

Table 1.1 – Table title

A	B	C	D
			Text 11 pt
			Spacing 1

1.2 Existing approaches

Compare relevant approaches using cited evidence [2].

1.3 Requirements

List the functional and non-functional requirements that follow from the analysis.

2 SYSTEM DESIGN AND SECURITY

Explain the design and its decisions before presenting the detailed architecture.

2.1 Architecture and technologies

Introduce each diagram in prose, explain how the components interact and justify the selected technologies. Cite each reused source at its first use [3].

2.2 Security

Explain risks, access control, data handling and tested protection mechanisms. Label proposals and untested controls as such.

3 IMPLEMENTATION AND TESTING

Describe the functionality actually implemented and the evidence for its behavior.

3.1 Implementation

Explain the relevant source code. The complete module is listed in Appendix A. The following loop calculates a sum:

```
int sum = 0;
for (int index = 0; index < values.Length; index++)
{
    sum += values[index];
}
```

3.2 Testing and results

Describe inputs, expected behavior, observed results and limitations. Illustrative values must not be presented as measurements.

3.3 Team contributions

State the concrete responsibilities and delivered work of each member.

CONCLUSIONS

Relate the observed results to the objectives, state the main limitations, distinguish implemented functionality from planned work and describe the next steps.

APPENDICES

APPENDIX A – Sequence diagram

Include longer code listings, diagrams and supporting material referenced in the main text.

APPENDIX B – Userflow diagram

Supporting material referenced in the main text.

INTERNSHIP SUMMARY REPORT

on the activities carried out during the internship

Host organisation: _____

Department (unit): _____

Faculty of Computers, Informatics, and Microelectronics

Study programme: Software Engineering

Mode of study: full time

Year of study: _____ Group: _____

Internship period: from _____ to _____

Activities carried out and results obtained:

Activities carried out: _____

Results obtained: _____

Difficulties encountered during the internship:

_____

Conclusions and recommendations:

_____

_____

Date of completion: ___ / ___ / 20___

Signature of the student: _____
