ABSTRACT

Summarize the task, the method, the result and the main conclusion in one paragraph.

Keywords: requirements, methodology, implementation, evaluation, documentation

INTRODUCTION

State the purpose of the laboratory work and the task conditions.

The objectives of the work are:

a) explaining the problem and the method;

b) implementing and testing the solution;

c) drawing conclusions supported by the results;

1 METHODOLOGY

Explain how the requirements, the implementation and the checks are connected before the first subchapter.

1.1 Model and notation

Equation 1.1 defines the sum of n values x_i; S denotes their total:

$$S = \sum_{i=1}^{n} x_i. \tag{1.1}$$

1.2 Implementation

Short code belongs beside its explanation; the complete program is in Appendix A. The following loop calculates the same sum:

```
int sum = 0;
for (int index = 0; index < values.Length; index++)
{
    sum += values[index];
}
```

2 RESULTS

Table 2.1 compares the values before and after the change; the values here are illustrative, not measurements.

Table 2.1 – Comparison of the results

Indicator	Initial value	Final value
Processing time, min	42.50	31.25
Errors, count	7	2

According to Figure 2.1, the input is processed in one step. Cite the source of a reused or adapted figure [1].

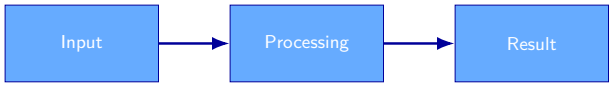

Figure 2.1 – Processing flow

CONCLUSIONS

Relate the results to the objectives, explain the limits and identify the next steps.
