ABSTRACT

This example demonstrates the report layout derived from the mandatory ELSE Word template. It contains the institutional cover, contents, abstract, introduction, numbered chapters, captions, source code, conclusions and bibliography. Its numbers and diagram are illustrative; they do not represent an experiment or a completed project. Replace the example content with the work required by the course. **Keywords:** requirements, methodology, implementation, evaluation, documentation, references

INTRODUCTION

An academic report explains its subject, the problem, the method and the observed results. Its claims and reused material need citations. The document uses the supplied report layout rather than conference-paper or thesis-defense front matter.

The example's objectives are:

a) explaining the problem and the method;
b) presenting results separately from illustrative values;
c) drawing conclusions supported by the observations;

1 METHODOLOGY

The method connects the requirements, the implementation and the checks. Explain that connection before introducing the subchapters.

1.1 Model and notation

Equation 1.1 defines the sum of n values x_i; S denotes their total:

$$S = \sum_{i=1}^{n} x_i. \tag{1.1}$$

1.2 Implementation

Short code belongs beside its explanation. Longer code goes in an appendix referenced from the main text. The following loop calculates the same sum:

```
int sum = 0;
for (int index = 0; index < values.Length; index++)
{
    sum += values[index];
}
```

2 RESULTS

Introduce tables and figures in prose before displaying them. Table 2.1 uses illustrative values to demonstrate a numeric comparison; these are not measured results.

Table 2.1 – Illustrative values for a comparison

Indicator	Initial value	Final value
Processing time, min	42.50	31.25
Errors, count	7	2

Figure 2.1 is a placeholder for an explained diagram. Cite a figure's source if it is reused or adapted.

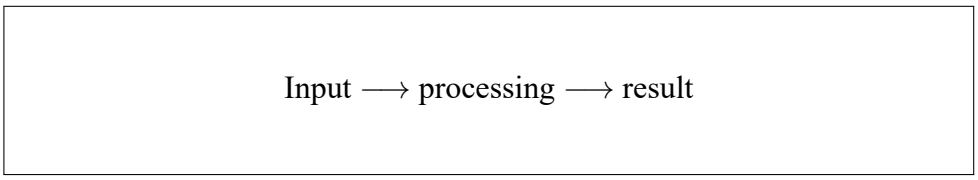

Figure 2.1 – Example of a report diagram

CONCLUSIONS

Relate the results to the objectives, explain the limits, and identify the next steps. Keep the report's subject and demonstrated behavior clear. The template formatting is based on the supplied ELSE model [1]; it does not establish that an assignment has been completed or accepted.
